I collaborate withother people for extract honey

Juillet 2021 : Evavocat
I make some internship in one week : I assisted
in archiving, office

Skills, Achievements and Other Informations

My technical achievements and programming ability :

The language I prefer and probably the most programming modern language I use is the java.It's an object-oriented programming language. In this language i make a game (Minesweeper game). I think it is the programmation language I can make the most things

Then we make also some programs in the language C. We learn how to interact with the System and we program another game (sliding puzzle)

I have also some basics on the language Python. I work above in High school

I also make some interaction with a database and Data structure. I learn how to create multiple table and insert tuple and how to search an information in a lot of data.

We learn to usually test and correct our program for fixing the bug in them. I can review some code make on these language. I like to implements new feature on a program and always looking for make them better.

Other informations :

With my professor we speak and aboard differents subjects like the different job in developpement like developper Front-end, Back-end, Full stack, UX or UI designer. I am curious to work with these various people and discover new technology like IOT. I want to work with real customers and makes their life better.

I search an internship job who begin in april on 2023 and which is 10 or 12 weeks long. In my research on internship job, I hope to have a full time job after my graduation fgiin my career. I work by passion and I want to make a difference. I am open and I am willing to learn to perform more.
